## CERTIFICATE OF COMPLIANCE

**Certificate Number** E493748  
**Report Reference** E493748-20170817  
**Date** 2023-April-07

**Issued to:** QuickBOLT a Division of Quickscrews International Corp  
5830 Las Positas Rd  
Livermore CA, 94551 US

**This is to certify that representative samples of** MOUNTING SYSTEMS, MOUNTING DEVICES, CLAMPING DEVICES AND GROUND LUGS FOR USE WITH PHOTOVOLTAIC MODULES AND PANELS - COMPONENT  
See Addendum Page for Product Designation(s).

Have been evaluated by UL in accordance with the component requirements in the Standard(s) indicated on this Certificate. UL Recognized components are incomplete in certain constructional features or restricted in performance capabilities and are intended for installation in complete equipment submitted for investigation to UL LLC.

**Standard(s) for Safety:** UL 2703, Mounting systems, mounting devices, clamping/retention devices, and ground lugs for use with flat-plate photovoltaic modules and panels-.

**Additional Information:** See the UL Online Certifications Directory at <https://iq.ulprospector.com> for additional information

This Certificate of Compliance indicates that representative samples of the product described in the certification report have met the requirements for UL certification. It does not provide authorization to apply the UL Recognized Component Mark. Only the Authorization Page that references the Follow-Up Services Procedure for ongoing surveillance provides authorization to apply the UL Mark.

Only those products bearing the UL Recognized Component Mark should be considered as being UL Certified and covered under UL's Follow-Up Services.

Look for the UL Recognized Component Mark on the product.

# INSTALL INSTRUCTIONS

1

2

3

4

5

6

## RECOMMENDED MATERIALS

- Rafter locator
- Chalk or crayon
- 3/16" Drill Bit
- Sealant

## INSTALLATION INSTRUCTIONS

1. Remove the Stone Coated Steel Sheets from the area in which you will be installing.
2. Locate and mark the rafters.
3. Place the Hook and predrill two holes with the 3/16" Drill Bit.
4. Remove the Hook, clear the debris, and fill the predrilled holes with sealant.
5. Place and mount the Hook using the Solar Screws.
6. Place the Stone Coated Steel Sheets back over the installation area.

## ADJUSTABLE HOOKS

- Adjust the Hook as needed either before or after mounting the Hook.

## TORQUE REQUIREMENTS

M8 Bolt requires 15 minimum torque ft-lb

## IF USING GALVA FLASHING

1. Make a cut in the paper
2. Apply sealant to the underside of the Galva Flashing
3. Slide the Flashing underneath the paper or nail down edges
4. Cover the edges of the Galva Flashing with sealant

PN 17614

# BUILDING CODE LETTER

March 22<sup>nd</sup>, 2023

To whom this may concern,

QuickBOLT is committed to excellence. The parts tested are durable goods, meaning the material composition and detailed specifications of the parts do not change. Therefore, all stamps are current. Any part tested will have the same results no matter what year the tests are performed. All testing and reports are current and valid with 2022 CBC standards.

SolarRoofHook is the previous name of QuickBOLT. Any test result referencing SolarRoofHook is referring to a QuickBOLT product.

All our parts were tested by a third-party test facility, in possession of a current engineering license for the state where the tests were performed for the following.

1. Uplift test
2. Downward load test
3. Lateral Test – Asphalt Mounts, and Metal Mounts only
4. ASTM E2440 and ASTM E330 Waterproof Tests - QuickBOLT only

The following is an excerpt from:

CALIFORNIA BOARD FOR PROFESSIONAL ENGINEERS AND LAND SURVEYORS  
guide to Engineering & Land Surveying for City and County Officials  
Page 12, Line 27

**27. If the license has expired between the time the engineering documents were prepared and the time when the local agency's review is performed, do the documents need to be re-sealed by a licensee with a current license? (B&P Code §§ 6733, 6735, 6735.3, 6735.4)**

**As long as the license was current at the time the engineering documents were prepared, the documents do not need to be re-sealed prior to review by the local agency. However, any changes (updates or modifications) to the documents that are made following the review by the local agency would have to be prepared by a licensed engineer with a current license and those changes would have to be signed and sealed.**

We trust the information provided will resolve any request for the test reports submitted to have a stamp from the current year.

Regards,

Rick Gentry  
Executive Vice President

Mr. Rick Gentry  
**QUICKSCREWS INTERNATIONAL**  
5830 Las Positas Road  
Livermore, CA 94551

Project Number 114269C

**Subject:** Stone Coat Tile Adjustable roof hook Laboratory Load Testing  
Part #'s SCA180, SCA180-1, SCA180S14, SCA180S14-1

Part #'s correspond to 17552, 17553,  
17554, 17555, 17614, 17615

Dear Mr. Gentry:

As requested, Applied Materials & Engineering, Inc. (AME) has completed load-testing the Stone Coat tile adjustable roof hook (see Appendix A, Figure 1). The purpose of our testing was to evaluate the tensile and compressive load capacity of the Stone Coat tile adjustable roof hook attached to a 2"x4" Douglas Fir rafter and 2"x2" header using #14-7x3" Quickscrew (IIWH QS T17 303 S/S, Part #'s SPHS14x420, SPHS14x424, SPHS14x340, SPHS14X450).

## SAMPLE DESCRIPTION

Mockup samples were delivered to our laboratory on May 1, 2014. Mockup configuration consisted of three 12" long rafters at 7"o.c., screwed to 1/2" OSB sheathing. The Stone Coat tile adjustable roof hook is attached through the OSB into the rafter with one fastener and into the header with one fastener.

## TEST PROCEDURES & RESULTS

### **1. Compressive Load Test**

A total of three tests were conducted for compressive load capacity on May 8, 2014 using a United Universal testing machine. Samples were rigidly attached to the testing machine and a compressive load was applied to the hook. The samples were loaded in compression at a constant rate of axial deformation of 0.09 in. /min. without shock until the bracket was bent to the maximum allowed by the test configuration; maximum deflection at maximum load was recorded. Detailed results are provided in Table I. Test setup and typical bracket bending at maximum load are provided in Appendix A. Based on the above testing, the average maximum compressive load of the stone coat tile adjustable roof hook attached to a 2"x2" Douglas Fir header using #14 Quickscrew was determined to be 250 lbf. Deflection at maximum load was measured as 0.5 inches.

### **2. Tensile Load Test**

A total of three tests were conducted for tensile load capacity on May 8, 2014 using a United Universal testing machine. Samples were rigidly attached to the testing machine and a tensile load was applied to the hook.

Mr. Rick Gentry  
QUICKSCREWS INTERNATIONAL  
Stone Coat Tile Adjustable roof hook Testing SCA180  
May 19, 2014

Project Number 114269C

The samples were loaded in tension at a constant rate of axial deformation of 0.09 in. /min. without shock until the bracket was bent and the bolt began to pull-out; maximum deflection at maximum load was recorded. Detailed results are provided in Table II.

Test setup and typical bracket bending at maximum load are provided in Appendix A. Based on the above testing, the average maximum tensile load of the stone coat tile hook attached to a 2"x2" Douglas Fir header using #14 Quickscrew was determined to be 415 lbf. Deflection at maximum load was measured as 3.0 inches.

### 3. Specific Gravity of Wood

The specific gravity and moisture content of the rafter and header member were tested in accordance with ASTM D2395, Method A (oven-dry) and were determined to be 0.370 and 9.4% and 0.325 and 8.3%, respectively.

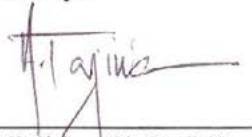

If you have any questions regarding the above, please do not hesitate to call the undersigned.

Respectfully Submitted,

WestlakeRoyalRoofing.com

August 17, 2022

To Our Valued Customers:

In regard to the Solar Roof Hooks that are manufactured by QuickBOLT, the product was developed and manufactured to meet the design needs and compatibility with our \*Unified Steel™ stone coated roofing system and as such, should be deemed to be fully useable in the designated fashion prescribed by Unified Steel™, Westlake Royal Roofing Solutions and QuickBOLT.

Sincerely,

*Rob Anderson*
